Assignment 3

```
import pandas as pd
 import numpy as np

df=pd.read_csv("C:/Users/admin/Downloads/iris.csv")

 df.min()
df.loc[:,'sepal_length'].min(skipna=False)

df.max()
df.loc[:,'sepal_length'].max(skipna=False)

df.drop('species', axis=1).std()
df.loc[:,'sepal_length'].std()

df.groupby(['sepal_length'])['sepal_width'].mean()
df = df.drop('species', axis=1)
df.mean()
df.mean(axis=1)[0:3]

 df.median()
df.loc[:,'sepal_length'].median()]

df.mode()
df.loc[:,'sepal_length']
setosa = df[df['Species'] == 'Iris-setosa']
print(setosa.describe())

setosa = df[df['Species'] == 'Iris-vesicolor']
print(setosa.describe())
```

```
setosa = df[df['Species'] == 'Iris-virginica']

print(setosa.describe())
```
