Assignment 1

```
import pandas as pd
import numpy as np

df = pd.read_csv("C:/Users/Admin/Downloads/archive/Iris.csv")

df.head()
df.tail()
df.isnull()
df.isna().sum()
df.describe()
print(df)

df.dtypes

df['SepalLengthCm'] = df['SepalLengthCm'].astype(int)

df.dtypes

from sklearn import preprocessing

df['Species'].unique()
label_encoder = preprocessing.LabelEncoder()
df['Species']= label_encoder.fit_transform(df['Species'])
df['Species'].unique()
one_hot_df = pd.get_dummies(df, prefix="Species",
columns=['Species'], drop_first=True)
one_hot_df
```
